Useful Medicinal Flora Enlisted in Holy Quran and Ahadith

Mushtaq Ahmad, Mir Ajab Khan, Sarfaraz Khan Marwat, Muhammad Zafar, Muhammad Aslam Khan, Tamaoor Ul Hassan and Shazia Sultana

Abstract: The present research work is a part of check list of medicinal flora and their uses enlisted in Holly Quran, Ahadith and Islamic literature. The main aim of this study is to establish how the different parts or aspects of plant based Islamic medicines (Tibb) such as use of medicinal plants, health principle, hygiene, practice, thought and culture when taken together, demonstrate both wholeness as a system and systematic nature of plant based Islamic medicines. In view of the importance of this study comprehensive and detailed data was systematically collected from Holly Quran, Ahadith’s books, Islamic history and books written on the Islamic medicines. Present findings confined to 32 medicinal plants species belonging to 30 genera of 23 families of plant kingdom. Results were systematically arranged by alphabetic order of botanical names followed by English name, Arabic name, family, habit and habitat, distribution, part used, medicinal uses and references cited from Holly Quran, Ahadith and Islamic books. It is concluded that herbal medicines are being used by about 80% of the world population, mainly developing countries for primary health care because of better cultural acceptability, better compatibility with human body and lesser side effects. It is recommended that plant based industries should be developed in the light of Islamic teaching and research.

Key words: Medicinal flora • Checklist • Uses • Holly Quran and Ahadith

INTRODUCTION

Cure of diseases through medicinal plants is always a salient feature of Islamic teaching and preaching. Islamic medicine started from Hazrat Adam (Alaihe Salaam.) and was completed at Hazrat Muhammad (Sallallaho Alaihe Wasallaam) but search and compiling of these medicine is still continued after the death of Holy Prophet Muhammad (Sallallaho Alaihe Wasallaam) through out the world. Al-Quran is one of the best reference book describing the importance of plants in different Surahs as in Al-Momeenoon, Al-Rehman, Al-Bakra and Al-Inaam. Our Holy Prophet (Sallallaho Alaihe Wasallaam) used and recommended medicinal plants for various ailments and food [1].

The history of Islamic medicine started form second century of Hijra, Abdul Malik Bin Habib Undlasi compiled his first book “Tib-e-Nabvi”. In third century of Hijra Muhammad Bin Abu Bakar Ihne Ultsani and Abu Naeem Isphani compiled their books on this topic. In the same era other Muslim scholars like Ali bin Mossa Raza and Imam Kazim Bin Jaffar also worked on Islamic medicines. In the fourth century of Hijra Muslims Scholars like Abi Jaffar Almustaghfri, Zia uddin Almukadasi, Shams uddin Albali, Kahal ibne Tarkhan, Muhammad bin Ahmed Zahabi, Muhammad Abu Baker Alkaim, Jalal uddin Alseuoti and Abdul Razzaq Bin Mustafa Altanki did a great work in this field. The books written in this era “Alnabvi fee Mannafal Makalat” by abdul Razzaq Altanki is a good one. The other book which is best and still available is “Kanzulamal Fee Sanan Walakwal” also provide us much more information about medicines of Holy Prophet (Sallallaho Alaihe Wasallaam) [2].

The climax of Islamic medicines started from Abu Bin Zakria Alrazi. He wrote his famous book “Haddi Kabeer” while the book “Kamal-ul-Sannat” by Ali Bin Abbas is also a good one [3] These medicinal plants continue to be extensively used as major source of drugs for the treatment of many ailments. There is now growing awareness to encourage indigenous production and processing of these plants used in different cultures and religious. Present investigation does not mean that the plant and plant parts which are described in Holy Quran for medicinal purposes but described for other purposes. But in this study emphasis was on medicinal uses as used in different cultures, traditions and religions. In this
research medicinal uses of these plants are experience of different communities of world. Holy Quran is considered to be the reference for the citation of these plants. Honey which is the product of different plant species is described for medicinal purpose in the Holy Quran. Keeping in view the importance of diverse medicinal flora and rich medicinal culture of Islam, research work was conducted to prepare checklist, investigate medicinal uses and create awareness about the medicinal flora enlisted in Holy Quran, Ahadith, Islamic literature and culture for the welfare of human communities throughout the world.

MATERIALS AND METHODS

The research work was conducted by reviewing the most acceptable literature given in Holy Quran, Ahadith and Islamic books. Comprehensive and detailed information about medicinal plants were collected from these sources. The notation given in the Islamic books were also cited and confirmed from Holy Quran and Ahadith. Check list and medicinal inventory of plants was arranged in systematic order of botanical names in alphabetic order followed by English name, Arabic name, family, habit and distribution, part used, medicinal uses and references cited from Holy Quran, Ahadith and Islamic books. Correct botanical names, their families and identification of plants were done by using of available literature [4-8]. Correct botanical nomenclature was also confirmed by comparing with already known specimens of herbarium of Quaid-i-Azam Univeristy, Islamabad-Pakistan.

RESULTS

Present findings were confined to 32 plant species belonging to 30 genera of 23 families enlisted in Holy Quran, Ahadith and Islamic literature. These plants are not only used in Islamic countries but also throughout the world for various aspects such as medicinal, food and industrial products. Data inventory constitute botanical name, English name, local names, Arabic name, family, habit and distribution; parts used, medicinal uses and references cited from Holy Quran, Ahadith and Islamic books.

1. **Acorus calamus** L.

   - English Name: Sweet flag
   - Local Name: Zareea
   - Arabic Name: Zareera, Oudulwaj
   - Family: Acoraceae
   - Habit and Habitat: Perennial herb found in marshy places and along riverbanks.
   - Distribution: N. and C. America, Europe, Asia.
   - Part used: Roots
   - Medicinal uses: Eye diseases, stomach pain, liver and intestinal disorder, heart diseases, conception, eczema, paralysis, asthma, hysteria, madness, malaria and arthritis

   References from Ahadith
   - Bukhari (Ravia: Hazrat Ayesha Siddiqa) Kitabul-libas [9].

2. **Agaricus campestris** L.

   - English Name: Mushroom
   - Local Name: Khunbii
   - Arabic Name: Esh El-Ghorab
   - Family: Agaricaceae
   - Habit and Habitat: Fleshy fungus found in terrestrial and moist habitat.
   - Distribution: Cosmopolitan
   - Part used: Whole part
   - Medicinal uses: Eye diseases, clear eyes, physical strength, germicide, arthritis, paralysis, parkensis, muscle pain, headache and dizziness
References from Ahadith

- Bukhari (Ravi: Saeed Bin Zaid) [9].

3. Allium cepa L.

English Name: Onion
Local Name: Piazz
Arabic Name: Basal
Family: Alliaceae
Habit and Habitat: Cultivated annual herb
Distribution: Pakistan, India, China, Russia, America and European countries
Part used: Bulb, leaves and seeds.
Medicinal uses: Antidote, Stomach diseases, cholera, Diarrhoea, throat infection, common cold, cough, fever, influenza, ear pain, improve sperm production, clear face and skin spots, appetizer, headache, hepatitis, piles, eye diseases, baldness, constipation, menstruation and intestinal diseases.

- Ibne Maja (Ravi: Mahdan Bin Abu Talah) [11]

4. Allium sativum L.

English Name: Garlic
Local Name: Lahson
Arabic Name: Soom
Family: Alliaceae
Habit and Habitat: Annual cultivated erect herb
Distribution: Egypt, Italy, France, Pakistan, China, India and USA
Part used: Bulb
Medicinal uses: Antidote, wound healer, dog bite, paralysis, digestive problems asthma, parkensis, intestinal pain worms, cough, hysteria, headache, tuberculosis.

5. *Beta vulgaris* L.

- **English Name:** Beet roots
- **Local Name:** Choqandar
- **Arabic Name:** Silq, banjar
- **Family:** Chenopodiaceae
- **Habit and Habitat:** Annual or perennial cultivated vegetable.
- **Distribution:** India, North Africa, Europe, Ireland and Pakistan
- **Part used:** Roots and leaves
- **Medicinal uses:** Eczema, baldness, liver infection, muscle weakness, skin disease, hepatitis, arthritis, kidney pain, headache, womb diseases and vaginal pain

References from Ahadith

- **English Name:** Indian frankincense
- **Local Name:** Lobban
- **Arabic Name:** Leeban
- **Family:** Buseraceae
- **Habit and Habitat:** Tree
- **Distribution:** Somalia, Ethopia, Oman, Yemen
- **Part used:** Gum of stem
- **Medicinal uses:** Germicide, stomach pain, wound healer, throat swelling and infection, eczema, cough, tuberculosis, arthritis and insecticide.

References from Ahadith

- Al-Jozi (Aljawziyya), Ibn-ul Qayyim, Tibb-e-Nabvi [10].
- Baihaqi [14]

7. *Boswellia serrata* Birdw.

- **English Name:** Frankincense
- **Local Name:** Goggle
- **Arabic Name:** Kundur
- **Family:** Burseraceae
- **Habit and Habitat:** An armed shrub or tree common on stony grounds and hillocks.
- **Distribution:** India and Pakistan
- **Part used:** Gum of stem
- **Medicinal uses:** Increase memory, clear urine, diarrhea, oral wounds, tongue infection, throat diseases, piles, clear the blood blocking, lungs infections, testes and anus swelling, and baldness.

References from Ahadith

- Tibe-Nabvi and Jadeed Science(Ravi: Ans Bin Malik (R.A) [2].
- Al-jozi (Aljawziyya), Ibn-ul Qayyim, Tibb-e-Nabvi [15].
8. **Cassia senna** L.

- **English Name:** Senna
- **Local Name:** Sana, sanamakki
- **Arabic Name:** Sanamakki
- **Family:** Caesalpiniaceae
- **Habit and Habitat:** A perennial herbaceous plant usually found on sandy grounds.
- **Distribution:** Pakistan, India, Algeria, Libya, Egypt, Sudan, Eritrea, Somalia Republic, Saudi Arabia, Kenya and Mozambique
- **Part used:** Leaves and fruit
- **Medicinal uses:** Cold effect on body, intestinal pain, remove the poisonous material from stomach, piles, waist pain, arthritis and eczema. Plant is also used as laxative and stimulant.

**References from Ahadith**

9. **Cichorium intybus** L.

- **English Name:** Chicory
- **Local Name:** Kasni
- **Arabic Name:** Hind-Baa
- **Family:** Asteraceae
- **Habit and Habitat:** Cultivated annual herb or may be found as weed in *Trifolium* field.
- **Distribution:** Europe, New Zealand, Pakistan, and India
- **Part used:** Leaves, flower, roots and seeds.
- **Medicinal uses:** Cough, antidote, cold effect on body, eye diseases, hepatitis, liver diseases, remove the blockage of kidney and urethra, headache, throat disease, kidney stones and diarrhea

**References from Ahadith**

10. **Cinnamomum camphora** L.

- **English Name:** Camphor tree
- **Local Name:** Kafoor
- **Arabic Name:** Kafoor
- **Family:** Lauraceae
- **Habit and Habitat:** Tree or shrub cultivated for ornamental and commercial purposes.
- **Distribution:** India, Sri Lanka, Japan and China
- **Part used:** Leaves and branches
- **Medicinal uses:** Tetanus, parkensis, hysteria, tuberculoses, headache, liver and kidney pains, oral and teeth swelling, cholera, breast pain, inner wounds, sexual stimulant. Tropical uses of camphor is stimulant and muscle relaxant.

DISCUSSION

History of Islamic medicine in its true context can thus be defined as a body of knowledge of medicine that was inherited by the Muslim in the early phase of Islamic history (40-247 AH/661-861 AD) from mostly Greek sources but to which became added medical knowledge from, Persia, Syria, India and Byzantine. In Islam diseases are cured in two ways, first the cure of soul through prayers and second the cure of ailments through medicines [17]. The Holy Quran is one of the reference books describing the importance of plants used for different ailments in various Surahs. Our Holy Prophet used certain herbs and recommended various medicinal plants for cure of common diseases. He recommended Hordeum vulgare (Barley) for heart diseases, constipation and vigorous [18].

A close look at checklist of medicinal flora tells us that these plants are not of Arabic origin but The Holy Prophet (PBUH), gave the references of such plants that are not only grown in Arab countries but exist through out the world. This shows that the Holy Prophet was light for the entire world. From this study it is found that Phoenix dactylifera (Date palm) has highest number of references in The Holy Quran. This plant is used for digestive problems, piles, sexual diseases and heart attacks. Up to 1959, the people of Dubai, Qatar, Abu Dhabi and Saudi Arabia used to have breakfast with dates and Khubus (bread). In ancient, dates were the major source of food for the people of Middle East. In modern times many products of food have been prepared from dates. In Holy Quran it is said “Your God is that who has made different kinds of orchids and gardens for you, those have colorful crops of Phoenix dactylifera, Olea europea (olive) and Punica granatum (pome grenade). Their shapes and tastes are similar as well as different also. Eat these fruit when ripen but keep the share of poor relatives and needy and do not waste them (Holy Quran: 141, Surah- Al-Anam). Olea europea (olive) is another plant that has many references in Holy Quran and Ahadith. And it is used for skin diseases baldness and pain killer. In Ahadith it is said that “eat the olive oil and apply it on the body, it is cure of seventy diseases” (Abu Naeem. Ravi. Hazrat Abu Haraira). The saying of Holy Prophet (PBUH) about medicines are spread over 200 books in the world [19].

Now a days there is much interest in medicinal plants throughout the world including developed countries like China, Germany, France, Japan, USA and UK. Similarly in developing countries like Pakistan and India, the benefits of modern medicines and health care reach only to small percentage of population. These could hardly reach the
large mosses living in the rural areas. Moreover in remote areas of the world where per capita income of people is very low, it becomes more difficult to buy complicated and expensive prescriptions. Hence there is a need for the inclusion of herbal medicines at primary health care level, since there long standing use is plant drug reasonably guarantee their medicinal efficacy and safety [20]. In this study an effort was also made to review the active constituents of these medicinal plants [21].

The necessity for exploration for such useful data from Holy Quran, Ahadith and Islamic books has long been felt with the increasing need of drugs, medicines and other useful products. In this way present approach of this study can be adopted to record the medicinal uses of plants for welfare of human beings. This study is the logical and applicable step in directions towards the ultimate goal of development of natural plant based industry in the light of Islamic history through out the world for prosperity and safety of the human beings.

ACKNOWLEDGEMENTS

Special gratitude is expressed to Khawaja Hafiz Peer Muhammad Abdul Haq, Darya Sharif District Attock-Pakistan for their moral support in Islamic studies. Authors are also grateful to Hafiz Qari Azhar Mehmood and Muhammad Shakeel, Islamic Institute of Bangai District Attock-Pakistan for fruitful suggestion and references during this research work.
